HYDRAULIC MARKING SYSTEM FOR GOLD BARS

This system has been specifically designed to mark gold bars. The maximum pressure is 20 tons. So this system is able to press complicated engravings. The pressure is adjustable. For the consecutive numbering of the 1 Kg bar is included an automatically numbering head. The numbering head can be switched by hand or pneumatically. The press stroke is less than 5 mm. The press is equipped with a two-hand control.

The marking units and the holder for the gold bars are variable, so that different gold bar sizes can be marked. The external dimensions of the press can also be changed if larger bars should be marked. Of course we design special solutions.
